EasyProcess Documentation

Release 0.0.7

ponty

April 10, 2011

CONTENTS

EasyProcess is an easy to use python `subprocess` interface.

Date: April 10, 2011

Contents:

EasyProcess is an easy to use python subprocess interface.

home: https://github.com/ponty/EasyProcess

documentation: http://ponty.github.com/EasyProcess

Advantages:

- easy interface
- command can be list or string
- logging
- timeout

CHAPTER

ONE

BASIC USAGE

```
>>> from easyprocess import EasyProcess
>>> EasyProcess('echo hello').call().stdout
'hello'
```

CHAPTER

TWO

INSTALLATION

2.1 General

- install setuptools or pip
- install the program:

if you have setuptools installed:

```
# as root
easy_install EasyProcess
```

if you have pip installed:

```
# as root
pip install EasyProcess
```

2.2 Ubuntu

```
sudo apt-get install python-setuptools
sudo easy_install EasyProcess
```

2.3 Uninstall

```
# as root
pip uninstall EasyProcess
```

CHAPTER

THREE

USAGE

```
>>> from easyprocess import EasyProcess
>>> # Run program, wait for it to complete, get stdout (command is string):
>>> EasyProcess('echo hello').call().stdout
<subprocess.Popen object at 0x9c7090c>
'hello'
>>> # Run program, wait for it to complete, get stdout (command is list):
>>> EasyProcess(['echo','hello']).call().stdout
<subprocess.Popen object at 0x9c7078c>
'hello'
>>> # Run program, wait for it to complete, get stderr:
>>> EasyProcess('python --version').call().stderr
<subprocess.Popen object at 0x9c708cc>
'Python 2.6.6'
>>> # Run program, wait for it to complete, get return code:
>>> EasyProcess('python --version').call().return_code
<subprocess.Popen object at 0x9c70bcc>
0
>>> # Run program, wait 1 second, stop it, get stdout:
>>> EasyProcess('ping localhost').start().sleep(1).stop().stdout
<subprocess.Popen object at 0x9c70a6c>
'PING localhost.localdomain (127.0.0.1) 56(84) bytes of data.\n64 bytes from localhost.localdomain (1
>>> # Run program, wait for it to complete, check for errors:
>>> EasyProcess('ls').check()
<subprocess.Popen object at 0x9c70a0c>
<Proc cmd_param=ls alias=None cmd=['ls'] (ls) oserror=None returncode=0 stdout="build
dist
docs
easyprocess
EasyProcess.egg-info
LICENSE.txt
MANIFEST.in
nosetests.xml
pavement.py
paver-minilib.zip
README.rst
setup.py
temp
tests
TODO" stderr="">
```

Exceptions in check:

```
>>> EasyProcess('bad_command').check()
Traceback (most recent call last):
  File "<stdin>", line 1, in <module>
  File "easyprocess.py", line 84, in check
    raise EasyProcessCheckError(self)
easyprocess.EasyProcessCheckError: EasyProcess check failed!
 OSError:[Errno 2] No such file or directory
 cmd:['bad_command']
 return code:None
 stderr:None
>>> EasyProcess('sh -c bad_command').check()
Traceback (most recent call last):
  File "<stdin>", line 1, in <module>
  File "easyprocess.py", line 84, in check
    raise EasyProcessCheckError(self)
easyprocess.EasyProcessCheckError: EasyProcess check failed!
 OSError:None
 cmd:['sh', '-c', 'bad_command']
 return code:127
 stderr:sh: bad_command: not found
```

CHAPTER

FOUR

LOGGING

Example program:

```
from easyprocess import EasyProcess
import logging

# turn on logging
logging.basicConfig(level=logging.DEBUG)

EasyProcess('echo hello').call()
EasyProcess('python --version').call()
EasyProcess('ping localhost').start().sleep(1).stop()
EasyProcess('python --version').check()
try:
    EasyProcess('bad_command').check()
except Exception, detail:
    print  detail

try:
    EasyProcess('sh -c bad_command').check()
except Exception, detail:
    print  detail
```

Output:

```
$ python -m easyprocess.examples.log
DEBUG:easyprocess:param: "echo hello" command: ['echo', 'hello'] ("echo hello")
DEBUG:easyprocess:reading config: /home/titi/.easyprocess.cfg
DEBUG:easyprocess:process was started (pid=18050)

```

CHAPTER

FIVE

REPLACING EXISTING FUNCTIONS

Replacing os.system:

```
retcode = os.system("ls -l")
==>
p = EasyProcess("ls -l").call()
retcode = p.return_code
print p.stdout
```

Replacing subprocess.call:

```
retcode = subprocess.call(["ls", "-l"])
==>
p = EasyProcess(["ls", "-l"]).call()
retcode = p.return_code
print p.stdout
```

CHAPTER

SIX

API

easyprocess.**EasyProcess**
alias of Proc

class easyprocess.**Proc**(*cmd*, *ubuntu_package=None*, *url=None*)
simple interface for subprocess

shell is not supported (shell=False)

call(*timeout=None*)
Run command with arguments. Wait for command to complete.

Return type self

check(*return_code=0*)
Run command with arguments. Wait for command to complete. If the exit code was as expected and there is no exception then return, otherwise raise EasyProcessError.

Parameters **return_code** – int, expected return code

Return type self

check_installed()
Used for testing if program is installed.

Run command with arguments. Wait for command to complete. If OSError raised, then raise EasyProcessCheckInstalledError with information about program installation

Parameters **return_code** – int, expected return code

Return type self

is_alive()
poll process (subprocess.Popen.poll())

Return type bool

pid
PID (subprocess.Popen.pid)

Return type int

return_code
returncode (subprocess.Popen.returncode)

Return type int

sendstop()
Kill process by sending SIGTERM. Do not wait for command to complete.

Return type self

sleep(*sec*)
sleeping (same as `time.sleep()`)

Return type self

start()
start command in background and does not wait for it

Return type self

stop()
Kill process by sending SIGTERM. and wait for command to complete.

same as `sendstop().wait()`

Return type self

wait(*timeout=None*)
Wait for command to complete.

Return type self

wrap(*callable*, *delay=0*)
returns a function which: 1. start process 2. call callable, save result 3. stop process 4. returns result

Return type
